Easily Customized

iSynergy® Small Business Solution (SBS) is the last file cabinet you will ever have to buy! It is a complete document management solution in a box! As a browser-based document management appliance, iSynergy-SBS makes finding documents as easy as searching the Web. You simply plug it into your network, create your filing cabinets and start scanning. iSynergy-SBS will do the rest.

iSynergy-SBS eliminates the need for filing cabinets, filing space, off-site storage, copies and document shipping. As soon as iSynergy-SBS is connected to your business, you will start saving by dramatically improving productivity, communications, customer service and more. With iSynergy-SBS, you increase your ability to meet compliance requirements and reduce business liabilities by eliminating lost documents, adding audit trails and securing document access.

iSynergy SBS Includes Everything for a Complete Solution:

iSynergy Server User Licenses

iSynergy Server is the Web-based interface that allows users to securely access documents stored in the iSynergy repository. It is the system for managing and archiving documents captured utilizing scanners, fax servers, or digital copier/printers (MFD's). iSynergy Server can meet the needs of any size business from a single user to the entire enterprise.

xTractor

xTractor is used to eliminate the burden of data entry from document capture and indexing. xTractor provides image processing and recognition technologies to enable the automated reading of barcodes and text from scanned documents. Defined templates allow automated sorting and document type assignment with field-based index recognition. The recognized index information is used to file the documents into the iSynergy repository eliminating manual indexing.

ScanSpeed and iScan

ScanSpeed and iScan are used for batch and interactive scanning and indexing. They are the capture front-end to the iSynergy solution that allows you to get rid of the paper. Both ScanSpeed and iScan are completely integrated into iSynergy and require no scripting or programming to work. Using ISIS drivers, iSynergy is compatible with over 350 scanners ranging from desktop to high-volume production.

Multi-Function Service

Equivalent to a scanner module, the Multi-Function Service provides connectivity to external image sources such as multi-function copiers, fax servers or other third-party equipment to deliver images into the iSynergy repository.

BarCoder

BarCoder increases productivity of document capture by automating the indexing process. BarCoder creates cover sheets at the click of a mouse with user-defined barcodes for quick and accurate document indexing.

iSynergy-SBS Specifications

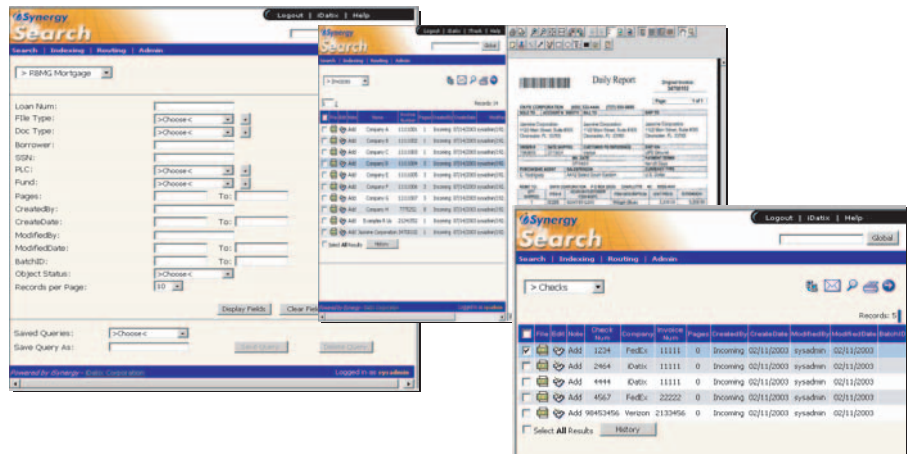

Hardware:

Processor: Pentium 4, 2 GHz
 Memory: 1 GB
 Hard Drive: Dual 80 GB
 Video: SXGA
 Network Adapter: 10/100 Mbps
 DVD RW / CD RW
 Sound Card: 16 Bit On-Board
 SBS Diamond Plate Case

Software:

Operating System: Windows XP Pro
 WEB Software: IIS
 iSynergy Products on Base Unit:
 Single User iSynergy Server
 ScanSpeed
 iScan
 Multifunction Service
 Data Exchange Service
 Quick Indexer
 Optional Upgrade Products:
 Additional Users
 Additional ScanSpeeds/iScans
 Full-Text Recognition and Search
 Xtractor
 BarCoder
 iLink
 iSynergy ERM
 Enterprise Upgrade
 Progression Workflow

Note: Additional services may be required for Installation, configuration, integration and training.

iSynergy-SBS is a single machine license of the iSynergy product suite and is limited to running on a single machine. iSynergy-SBS can be flexibly configured from a basic single user solution and is expandable up to a maximum of 25 users. Larger implementations must use iSynergy Enterprise. Multiple users can access iSynergy through the iSynergy Web Server using IE 6.0 or Higher. iSynergy SBS ships with the MSDE version of SQL Server and SBS is limited to running only MSDE.

iSynergy SBS can be easily upgraded with additional users or expanded to the Enterprise version of iSynergy to accommodate using the full version of SQL, separating the iSynergy component programs to other servers or expanding to a full enterprise implementation. iSynergy SBS also works with iLink, iDatix's point-and-click image enabling program. iLink can be used with most Windows programs and image scanning retrieval functions.

Installation and Training

iDatix pre-configures the Small Business Software Package into the iSynergy-SBS diamond plate case and comes ready to connect to your network. iDatix Professional Services Group or a Certified iDatix iTeam Partner can provide valuable services to help you install and setup your Document Management Appliance. It is important to select the right scanner and setup the correct processes to maximize the benefits that the iSynergy-SBS Solution can provide. iDatix also provides training classes at our facilities to help you quickly gain the knowledge you need to create the best solution for your environment.

The iDatix Difference

iDatix delivers technology that offers dramatic and measurable results. Our products immediately increase productivity, reduce costs and exceed expectations. iDatix is committed to delivering effective business solutions that have a measurable return for our clients.

iSynergy empowers the enterprise to effectively manage the vast amounts of unstructured data that fill business operations. With iSynergy Business Automation products, information becomes highly available to any authorized user.

iSynergy: The smarter way to manage information!
